ABSTRACT

A method for interacting with a slide-show presentation, the slide-show including a plurality of slides. A slide is retrieved from among a plurality of slides from a memory storage device. The slide is displayed to a user on a display device at a first resolution. The method provides the user with a capability for performing one or more operations corresponding the displayed slide. The operations include displaying a pop-up text window which provides details about the displayed slide. The operations further include a capability for displaying the slide in a zoom mode, whereby the slide is displayed at an enhanced resolution and a further capability for simultaneously displaying said plurality of slides including said displayed slide in a thumbnail-sketch mode including descriptive text.
